Shimeji Browser Extension
Privacy Policy

In this document you can read about how we at shimejis.xyz handle your personal data and how we respect your privacy.

What data do we collect and why?

User Account

As user of the Shimeji Browser Extension you need to have user account at shimejis.xyz, which will be created once you start using the browser extension and you are prompt to login with your google account. We store basic information that Google provide us, such as your name, email, and Google user id.

- The creation of an account is required so we can store your Shimeji configuration.
- We store your Google user id to associate your shimejis.xyz and Google account.
- We store your name and email so we could contact you in the case of a problem.

Referral

If you are invited by a friend through an invite url, we store the referral user once you sign up. That gives us the possibility to reward that person.

Analytics

We make use of Google Analytics in the browser extension and on the supporting website (shimejis.xyz). It's only used to register the amount of active users. No browsing activity will be registered. Furthermore it's anonymous, because a Session ID is generated randomly and doesn't relate to user accounts.

Crash Reports

To improve stability we automatically detect errors and build crash reports. When an error occurs you will be prompted whether or not you want to send a crash report to us. Such report contains information about your software and hardware configuration, and your user id and email address so we could analyse the problem and contact you if needed.

Who receives the data?

- Information about your account stored at shimejis.xyz is only accessible by shimejis.xyz.
- The reports generated by Google Analytics are only visible to us (and Google).
- We use sentry.io for handling crash reports, which are only visible to us (and Sentry).
- All other data is stored locally on your computer within the browser extension's local storage.
- We do not share any other information with third parties.

Security

Communication between the browser extension and the supporting website shimejis.xyz, will be transported securely over HTTPS through my.shimejis.xyz when handling sensitive user information. The same holds for sending analytic data and crash reports.
The extension is configured to prohibit connections to all other endpoints.

Permissions granted

In order to install the browser extension you have to give the extension the permission to:

1. Adjust the context menus:
   • For the creation of user interface elements so you can interact with the shimejis.
2. Accessing your browser tabs and accessing data on the sites you visit:
   • To let the shimejis interact with site elements on all web sites you visit.
3. Know your Google identity and email:
   • It is needed to save your shimeji configuration and associate it with your google account.

If you have any questions regarding the privacy, please contact us at info@shimejis.xyz

Kind Regards,

Jarno Le Conté
